

## ABOUT QM BEARINGS

QM Bearings specializes in the innovative design, manufacture and marketing of bearings and couplings to outlast competing products. Our products are built to last. They have earned a reputation for surviving harsh environments yet they are competitively priced. Thousands of companies in over 40 countries are reducing downtime and maintenance costs with our products every day.

Can a QM product last too long? We don't think so and neither do our satisfied customers.

Precise manufacturing methods and innovative designs result in product benefits unmatched by our competition. The little things we do add up in a big way. And yet our products cost no more than ordinary choices. Consider how long QM Bearings products last and you'll realize the true cost is considerably lower.

We set high standards for ourselves when manufacturing products and high standards also apply when we serve our customers. Our customers appreciate how easy we are to work with, no matter what kind of difficult application they need resolved, and how we can ship most orders the same day they are received.

### Applications

- Pulp and paper plants
- Oil and gas industries
- Aggregate and mining operations
- Steel industries
- Sawmills
- And others

## OUR STRENGTHS

### Durable

QM Bearings products last longer than competing products because we make the extra effort to design and manufacture precision-made products with tighter tolerances. As just one example, the steel housings that we use are more rugged than cast iron. That's why we have the confidence to offer a lifetime guarantee against housing breakage. Considering how long our products last and how most of our prices match those of our competitors, our products are a better value.

### Innovative

What we learn from customers using our products in harsh environments results in improved products for everyone. Even if customers don't have extreme applications, they benefit from these innovations without paying more for our brand. For example, we're the only company in our product category that offers 15 primary and secondary sealing choices for the ideal bearing solution without charging custom bearing prices.

### Responsive

We ship most orders the same day they are received. The extensive parts inventory at five locations across North America allows us to build and ship products faster than our competitors. Ask around—QM Bearings is notorious for prompt service and problem solving unmatched by anyone in our industry.

### Easy To Work With

Exceeding our customers' expectations is our top priority and we won't let complicated procedures get in our way. We're straightforward and fair to deal with. Customers like our honest and dedicated manner of doing business.

## PRODUCT LINES

QM Bearings produces three tough product lines that endure in applications where other brands fail.

### Blue Brute Bearings

Self-aligning spherical roller bearings in a steel housing for heavy loads and harsh environments.

### Quick-Flex Couplings

A urethane insert fits between two coupling halves with a cover for quick installation and replacement to reduce downtime. Never needs lubrication.

### Rigid Compression Couplings

Strong steel couplings are bored to a shaft size and then split for bolting on the shaft for easy installation.

## DISTRIBUTION CHANNELS

QM Bearings products are sold in over 40 countries through a network of distributors and original equipment manufacturers and supported through a select group of agents, representatives and internal sales professionals.

## LEADERSHIP

QM Bearings is a privately held corporation founded in 1951 and now managed by five partners:

- **Cory Shaw** Vice President & General Manager, Board Member
- **John Sethen** Vice President Engineering, Board Member
- **Mark Flaherty** Vice President Sales, Board Member
- **Justin Gu** Vice President Finance, Board Member
- **Don Yorston** Board Member
